

Enterprise Content Management

Leveraging your RDIMS investment

Join us in Ottawa on December 15th for a morning of insights on implementing and maintaining a combination of business processes and ECM software systems. IBM business partner, Performance SQA, will discuss identifying how to leverage your current RDIM investment and putting you in control of your content while supporting your organizational standards.

Take advantage of an exceptional agenda that includes:

- **Real Case Studies** – IBM's Worldwide ECM Industry Leader for Government will share how other agencies are managing their content.
- **Advanced Case Management** - Optimize Case Outcomes with Information, People and Process by providing a 360 degree view of a case. Learn about richer case management capabilities providing greater collaboration, more flexible interfaces, advanced analytics and a more interactive solution enabling customers and partners to take their solutions to the next level.
- **Content Analytics** - Get ahead of the curve with new business insight and optimization from unstructured and semi-structured content. Expose trends, patterns, and anomalies locked away in vast amounts of content to enable rapid and informed business decisions. See how organizations are driving smarter business decisions from content, and how you can do the same.
